

REMARKS

In this preliminary amendment, Applicants have cancelled claims 1-12 without prejudice or disclaimer of the subject matter thereof and have added claims 13-21 to clarify that which Applicants consider to be the invention. Applicants respectfully submit that the new claims are fully supported by the original specification as filed.

Applicants recite that a video correction signal generator generates a predetermined correction signal in accordance with a pixel included in at least one column that is *at a farthest position*, or at least at a further position than another pixel, from the output buffer. The correction signal, determined based on the pixel at the farther or farthest position, is then applied to the video signal of *every pixel in the at least one column* of the liquid crystal display device. (See, for example, page 19, line 16 - page 20, line 27 and Figures 9 and 10 of the present application).

Favorable consideration and allowance are earnestly solicited. Should there be any questions after reviewing this paper, the Examiner is invited to contact the undersigned at 617-248-4038.

Respectfully submitted,
CHOATE, HALL & STEWART
